Abstract: We describe the guidelines to prepare a manuscript to be submitted as abstract and as full paper to be presented at the IWSM'36 to be held in Trieste from July 18-22, 2022.

Keywords: Conference; Guidelines; Manuscript; Statistical Modelling.

1 Introduction

This document describes the guidelines which should be followed by authors of abstracts and manuscripts to be submitted for presentation at the IWSM'36 to be held in Trieste from July 18-22, 2022. The guidelines described below are needed in order to be able to combine all the papers into a single proceedings book of acceptable quality. Please follow the guidelines as strictly. Deviations may result in papers being sent back to the authors with the request to change their documents according to the guidelines.

2 General guidelines

1. Follow the supplied file templateIWSM2022.tex very tightly, especially the part which is used to generate the title of the paper.

2. Do not specify any definitions, commands or style parameters. Upon submission, your file will be checked for presence of \newcommand or \def statements and if found, an error message will be reported.

---

3. Do not include any other usepackage commands in the preamble of your document than those used in templateIWSM2022.tex (`iwsm`, `graphicx`, `amsmath`, `amssymb`, `psfrag`). When performing the final compilation of your files for the proceedings book, everything in your file appearing before the `\begin{document}` statement will be ignored and replaced by

   ```
   \documentclass[twoside]{report}
   \usepackage{iwsm}
   \usepackage{graphicx}
   \usepackage{amsmath, amssymb}
   \usepackage{psfrag}
   ```

4. Please do not change the document before `\begin{document}`.

5. When creating labels for cross-references, please start always by surname of the first author, e.g., `\label{smith:likelihood}`.

6. Do not change the font size and make sure that text, tables, figures, references etc. do not extend over textwidth.

7. Do not use special characters (e.g., accented letters). Use respective `\TeX` compositions instead, such as `\~n` for ñ, `\'a` for á, `\'{\i}` for í, `\'e` for é, `\v{s}` for š, `\r{u}` for ů etc.

8. The template file templateIWSM2022.tex contains example material to guide you through the preparation of your paper. However, remove all the redundant material from your final document before submitting.

9. Rename the template file to make it identifiable.

3   Authors

For all authors give names with first name (not abbreviated) and family name (surname).

4   Keywords

Start each keyword in upper case.

5   Sectioning

Use only `\section` and `\subsection` levels of sectioning the text. Do not use any lower levels.

6 Tables

Tables can be included at any place in the text. As general format, use tables with horizontal lines only (i.e., no vertical lines separating columns). Start and end each table with a horizontal line. Tables should be incorporated using a table environment with a caption text above the table. Example code for a table with three columns is as follows:,

```
\begin{table}[t!]\centering
\caption{Caption text ABOVE the table.}
\label{smith:tab:example}
\medskip
\begin{tabular}{lcr}
\toprule[0.09 em]
\textbf{Title col1} & \textbf{Title col2} & \textbf{Title col3} \\\hline
row1 col1 & row1 col2 & row1 col3 \\
row2 col1 & row2 col2 & row2 col3 \\
row3 col1 & row3 col2 & row3 col3 \\
\bottomrule[0.09 em]
\end{tabular}
\end{table}
```

7 Figures

The only allowed format for figure files is PDF (.pdf). Please, do not include figures in any other format. Use file names which begin with the surname of the first author. Keep the graphics files in the same directory as the main LaTeX file.

Figures can be included at any place in the text and should be incorporated using the \includegraphics command within a figure environment. Make sure you specify also the extension of the file (.pdf). Caption text should go below the figure. For example, to include the figure saved in smith-fig01.pdf, we may use,

```
\begin{figure}[bt!]\centering
\includegraphics{smith-fig01.pdf}
\caption{Caption text BELOW the figure.}
\label{smith:fig01}
\end{figure}
```

Additional examples are given in   templateIWSM2022.tex   Use font sizes large enough so that axes labels, legends etc. are readable. The proceedings will not only be printed but will also be available electronically (pdf file) in an archive of the webpage of the Statistical Modelling Society. For this reason, we encourage authors to submit their figures in colors. Nevertheless,

in the printed version of the proceedings, all figures will be by default printed on a grey scale. Hence the authors should make sure that their plots remain their informative value even when printed on a grey scale.

Acknowledgments: We want to thank the organizers of previous IWSM's for preparing previous versions of these guidelines which we could use as a starting point to prepare this document.

References

References should be placed in the text in Author (Year) form. Use Author 1 and Author 2 (Year) if there are two authors and Author 1 et al. (Year) if there are more than two authors of the work to be cited. Do not use any \cite command to create citations. The list of references should be created manually and placed in alphabetical order at the end of the manuscript. Please, use the following format:

Smith, A. (2005). *Book title*. Publisher address: Publisher.

Smith, A. and Smith, B. (2007). Paper title *Journal*, **Volume**, Page range.

Smith, A., Smith, B., and Smith, C. (2009). Paper title. *Journal*, **Volume**, Page range.

Smith, A., Smith, B., and Smith, C. (2010). Paper title. In: *Proceedings*, **Volume**, Address, Box, A. and Cox, B. (Eds.), pp. Page range.

See also   templateIWSM2022.tex   for examples.
